

PCI Online Backup and Restore Service

Tired of lost files and computer downtime caused by user error and corrupted tape drives..?

If Yes PCIs Online Backup and Restore Service is for you...

Service BENEFITS

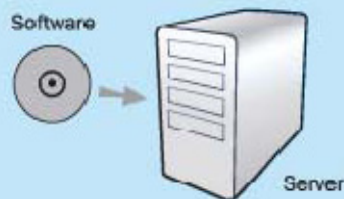

- No more tapes or significant reduction in tape reliance.
- Protect a greater amount of data in a smaller amount of space with fewer resources than traditional tape solutions.
- Fully automated solution
- Instant offsite data protection
- Built-in ability for hot online backups of enterprise applications
- Backup more frequently due to shorter backup windows.

Quick Restoration times

Lost files, documents and computer downtime due to user error and corrupted disk drives are a regular occurrence and are a significant, typically, hidden cost in any business. In addition, restores from tape can take an inordinate amount of time, and often the restore simply fails, directly impacting the business.

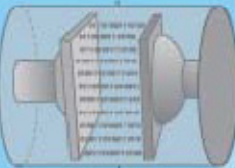

PCI Online Backup and Restore Service will ensure that a copy of vital data can be restored quickly and easily on demand.

SOFTWARE INSTALLED ON ONE SERVER/PC

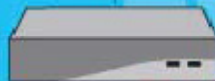

Reliable, secure backup and restore capabilities are crucial to all businesses, but traditional methods of data backup have often proven cumbersome and costly. Now you can solve this problem by partnering with PCI Services.

DATA ENCRYPTED AND COMPRESSED

PCI Online Backup and Restore Service is an affordable, easily managed and easily deployed solution.

TO A LOCAL VAULT FOR RECOVERY

A Solution You Can Trust

Many companies trust the backup of their data to a fragmented and often ineffective policy of distributed tape devices, manual routines and off-site tape storage. Online backup and restore provides a unique, automatic, safe approach to data storage by offering:

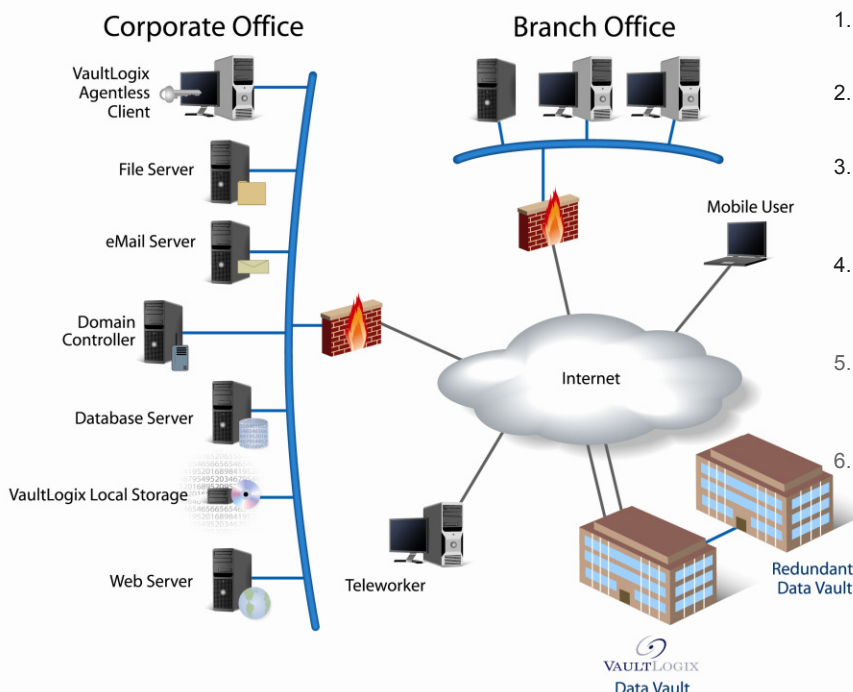

- A fully automated process with backups saved on disk for rapid file restoration
- Secure online transfer of fully encrypted data to an off-site data center, ensuring regular backups are stored safely and remotely
- Automated alert if backup fails

Technology Solutions for your Business Success

PCI Online Backup and Restore Service

How it Works

1. Software is installed on one server/PC
2. Data is encrypted and compressed prior to offsite transfer
3. A local vault can be established onsite for rapid recovery
4. Data is transferred offsite to secure data center
5. All client data is held on disk for rapid recovery.
6. The primary data center is mirrored offsite for full redundancy

System Requirements

PCI Online Backup and Restore Service was designed for the distributed network environment (PCs, laptops and servers), and most Unix environments via an NFS daemon, including Linux.

- Microsoft Windows 95, 98, NT and 2000
- Novell NetWare
- Microsoft Exchange Server
- Microsoft SQL Server
- Lotus Notes/Domino Server on NT
- Oracle 8 or higher

IT staff is freed to work on other projects

IT staff are an expensive, often scarce resource. Their time could be better spent on more productive projects instead of mundane, repetitive tasks such as rotating backup tapes, organizing offsite collections and performing time consuming restores.

Guaranteed Data Protection

Tighter legislation and the fact that data is now recognized as a valuable asset in any business means company directors have a personal responsibility to protect it.

Cost savings compared with traditional backup and restore methods

We are confident that given some very basic information about current data volumes, estimated growth and current backup and restore processes, we can prove conclusively that **PCI Online Backup & Restore Service will save money.**
